

Safe with prolonged entrance edge

We have prolonged the entrance edge for our Safe products from diameter Ø400 and bigger. This gives an even simpler and safer mounting!

Set-off-Safe

Easy mounting of big systems

Set-off-Safe

At big dimensions it can be difficult to press ducts and fittings together since they have a tendency to "slip off". In order to make the joining easier we have extended and slightly coned the entrance part of the fittings.

If you, in order to facilitate the mounting in the duct, bring one side of the fitting in before the other the lips of the gasket will lay down in different directions (see picture). This will make the tightness inferior and an unnecessary leakage will follow.

In order to avoid this you shall make sure to push the whole circumference of the fitting simultaneously into the duct.
